# What can be automated on each marketplace

Every seller activity, per marketplace: what our scripts already do, what the marketplace's API lets us automate next, and what can only be done by hand.

**AUTOMATIC** our scripts do it today | **CAN AUTOMATE** the API supports it | **CAN AUTOMATE*** API must be requested first | **PARTLY** only part of it (see note) | **MANUAL** only by hand in the portal | **N/A** doesn't exist there

| Activity | Vinted | eBay | Amazon EU | Mirakl shops[1] | Fnac | AbeBooks / IberLibro | booklooker | Kaufland | bol.com | Cdiscount | Allegro | AliExpress | Temu | TikTok Shop | Galaxus |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| **BOOKS (LISTINGS)** | | | | | | | | | | | | | | | |
| **Add a book** | AUTOMATIC push | AUTOMATIC push | AUTOMATIC push (existing page) | AUTOMATIC push | AUTOMATIC push | AUTOMATIC push | AUTOMATIC push | AUTOMATIC push | AUTOMATIC push | AUTOMATIC push | AUTOMATIC push | AUTOMATIC push (own product) | AUTOMATIC push (own product) | AUTOMATIC push (own product) | AUTOMATIC push (feed by ISBN) |

[1] Mirakl shops = Casa del Libro, El Corte Inglés, Carrefour, Worten (Portugal + Spain), IBS.it (Italy), Empik (Poland) and E.Leclerc (France). They run on the same platform (Mirakl), so they work the same way.

* AbeBooks' Order Update API is separate from the listing API and has to be requested from AbeBooks.

No marketplace has been tested with real seller accounts yet. The table is based on each marketplace's official API documentation (Vinted Pro, eBay, Amazon SP-API, Mirakl, Fnac, Kaufland, AliExpress Open Platform, Temu Partner API, TikTok Shop Partner API, bol.com Retailer API, Octopia Seller API, Allegro REST API, booklooker REST API, Galaxus technical integration).

# Managing sales automatically: what it would take

Listing is done. Below is what we can add so that sales are handled automatically too, in order of importance, and what will stay manual.

## Next steps for sales (all possible through the APIs)

| | |
|---|---|
| **1. Stop double sales** | The same book is listed on up to 21 marketplaces, but there is usually 1 copy. When it sells on one, set its stock to 0 everywhere else, automatically. **This is the most important one**: without it, the same copy can be sold twice. |
| **2. One list of all sales** | Collect new orders from every marketplace into one place, and add them to the daily email (or more often): what sold, where, price, buyer address. |
| **3. Auto-accept orders** | Mirakl shops, Fnac, AbeBooks and Cdiscount require accepting each order. If it isn't accepted in time, the order is cancelled and the shop's rating drops. This can be automatic when the book is in stock. |
| **4. Shipping** | Send the tracking numbers back to each marketplace automatically. Packing and taking parcels to the carrier stays manual. |
| **5. Messages in one inbox** | Collect buyer messages from eBay, Mirakl, Fnac, Kaufland, Cdiscount, Allegro and TikTok Shop into the email report, so nobody has to check each portal. Vinted, AbeBooks and the Amazon inbox stay manual. |

## At a glance

• **Listing books:** automatic today on all 21 marketplaces.
• **Sales:** can be automated almost everywhere (orders, accept, tracking, cancel).
• **Vinted** is the most manual: its API covers listings and orders only.
• **Leads** (offers to interested buyers) exist only on eBay. Elsewhere, buyer interest arrives as messages.

## Stays manual

• Packing and handing parcels to the carrier
• Vinted: messages, buyer offers, returns, payouts (Vinted's API doesn't offer them)
• Amazon: reading buyer messages, approving returns
• AbeBooks: messages, returns, payouts
• Reviews (except eBay)
• Opening seller accounts, contracts, bank details
