What can be automated on each marketplace

Every seller activity, per marketplace: what our scripts already do, what the marketplace's API lets us automate next, and what can only be done by hand.

AUTOMATIC Automatic today: our scripts already do it

CAN AUTOMATE The marketplace API supports it: we can build it

CAN AUTOMATE* API exists but must be requested from the marketplace / confirmed

PARTLY Only part can be automated (see note)

MANUAL Only by hand in the seller portal / app

N/A Doesn't exist on this marketplace

Activity	Vinted	eBay	Amazon EU	Mirakl shops[1]	Fnac	AbeBooks / IberLibro	Kaufland
BOOKS (LISTINGS)							
Add a book	AUTOMATIC push	AUTOMATIC push	AUTOMATIC push (existing Amazon page)	AUTOMATIC push	AUTOMATIC push	AUTOMATIC push	AUTOMATIC push
Update price / stock	CAN AUTOMATE update items	CAN AUTOMATE Inventory API	CAN AUTOMATE Listings API	AUTOMATIC push --resend	AUTOMATIC push --resend	AUTOMATIC push --resend	AUTOMATIC push --resend

MONEY							
Payouts, fees, sales reports	MANUAL in app	CAN AUTOMATE Finances API	CAN AUTOMATE Finances API + reports	CAN AUTOMATE accounting API	MANUAL seller portal	MANUAL seller account	CAN AUTOMATE sales reports API

[1] Mirakl shops = Casa del Libro, El Corte Inglés, Carrefour and Worten (Portugal + Spain). They run on the same platform (Mirakl), so they work the same way.

* AbeBooks' Order Update API is separate from the listing API and has to be requested from AbeBooks.

No marketplace has been tested with real seller accounts yet. The table is based on each marketplace's official API documentation (Vinted Pro, eBay, Amazon SP-API, Mirakl, Fnac, Kaufland).

Managing sales automatically: what it would take

Listing is done. Below is what we can add so that sales are handled automatically too, in order of importance, and what will stay manual.

Next steps for sales (all possible through the APIs)

1. Stop double sales	The same book is listed on up to 10 marketplaces, but there is usually 1 copy. When it sells on one, set its stock to 0 everywhere else, automatically. **This is the most important one**: without it, the same copy can be sold twice.
2. One list of all sales	Collect new orders from every marketplace into one place, and add them to the daily email (or more often): what sold, where, price, buyer address.
3. Auto-accept orders	Mirakl shops, Fnac and AbeBooks require accepting each order. If it isn't accepted in time, the order is cancelled and the shop's rating drops. This can be automatic when the book is in stock.
4. Shipping	Send the tracking numbers back to each marketplace automatically. Packing and taking parcels to the carrier stays manual.
5. Messages in one inbox	Collect buyer messages from eBay, Mirakl, Fnac and Kaufland into the email report, so nobody has to check each portal. Vinted, AbeBooks and the Amazon inbox stay manual.

At a glance

• **Listing books:** automatic today on all 10 marketplaces.
• **Sales:** can be automated almost everywhere (orders, accept, tracking, cancel).
• **Vinted** is the most manual: its API covers listings and orders only.
• **Leads** (offers to interested buyers) exist only on eBay. Elsewhere, buyer interest arrives as messages.

Stays manual

• Packing and handing parcels to the carrier
• Vinted: messages, buyer offers, returns, payouts (Vinted's API doesn't offer them)
• Amazon: reading buyer messages, approving returns
• AbeBooks: messages, returns, payouts
• Reviews (except eBay)
• Opening seller accounts, contracts, bank details
